

All the **light**
you need.

Easydive
THE UNIVERSAL HOUSING

When you choose Easydive, you're not just buying a product, you're joining the tribe: a community of divers who won't settle for less. The Revolution light is designed and manufactured in Italy to last a lifetime.

5 tips to make it last

1. Recharge the **battery** after every dive, before storing it away. Recharge the battery every 2 months, even if you aren't using it. You can recharge it even when it's half full.

2. Water residue can oxidise the pins. Before plugging in the jack, **blow into the connector** and **dry it** thoroughly. After use, **lubricate** the charger connector with electrical contact spray or WD-40. Store it in a **dry** place.

3. After every dive, **rinse** it in lukewarm fresh water and dry the charging connector.

4. Before **storing** or **transporting** it: enable **Fly Mode** via the Revmote app and insert the **locking pin**. When flying, we recommend fully discharging the light before departure.

5. Set the switch to **Off**, then screw the locking knob all the way in. If everything is positioned correctly, the switch will remain locked: check it before boarding.
